

Queensland Digital Health Grand Rounds Series

# Building Digitally-Integrated Networked Biobank Infrastructure in Queensland

All staff  
welcome

Biobanking is fundamental to research that aims to understand, prevent, diagnose and treat disease. Design and development of systems for a digitally-integrated networked biobank serves to enhance visibility and access by investigators to quality biospecimens linked to health data. This forms essential state-wide research infrastructure for CoViD-19 and other conditions contributing to the Queensland research translation ecosystem.

Presented by Professor Janet Davies | BSc PhD, GAICD,  
Assistant Director of Research, Metro North Hospital and  
Health Services.
