

Queensland Digital Health Grand Rounds Series

# Explore Fast Healthcare Interoperability Resource (FHIR) Concepts

*All staff  
welcome*

Fast Healthcare Interoperability Resource (FHIR) is the fundamental standard developed by Health Level Seven (HL7) and is an interoperability specification for the exchange of healthcare information electronically.

This month's Queensland Digital Health Grand Rounds will explore FHIR concepts, underpinned by real-world examples that demonstrate how this standard effectively supports the exchange of information and the development of apps.

Presented by Associate Professor Liam Caffery | PhD (Medicine),  
B Info Tech, Dip App Science (Diag Rad)
